VETERAN AND FAMILY WELL-BEING FUND

Everyone is different. We all adjust uniquely to major life changes. For most Veterans, transitioning to life post-service is a significant life change. The 2016 Life After Service Study revealed that more than half of Regular Force Veterans transition well to post-service life. We are firmly committed to help increase this number.

No matter who we are, or our stage in life, we seek well-being. How is well-being defined and why is it important in supporting Veterans in their life after service?

## DEFINING WELL-BEING

To help define well-being as it relates to Veterans and their families, research teams have reviewed expert literature, considered findings from Veterans' population studies and held a range of consultations.

This research highlighted that health does not equal well-being. Health—physical, mental, social and spiritual functioning—is one of seven critical domains of well-being (see graphic).

Well-being is a holistic construct where all seven domains are inter-dependent. Employment can impact health, social integration and finances. Conversely, health, social integration or financial problems can affect the ability to find or retain a job.

Today, VAC offers a variety of services and programs that support well-being. And eight new offerings, announced in Budget 2017, will be available as of April 1, 2018.
